Two takeaways!

Quality lies in structure

- The best code is developed with structure as the forefront of development.

- Using correct conventions, good commenting, and adherence and utilization of the paradigm (Object Oriented Design

- Well structured code is workable, maintainable, and reusable.

- Code developed in this way far outlasts and outperforms its competition!

Develop yourself to better develop for all

- We are the most important part of the algorithm that is computational problem solving.

- Your diversity, ability to remain relevant, and malleability add to the value you contribute

- Create practices that develop these traits to generate a lifetime of growth.

- Make self part of the equation of best development.
